

INTRODUCING CYCLEBINDING®

The CycleBinding® shoe and pedal system is a major move forward in bicycle technology that delivers radically improved performance, safety and convenience.

CycleBinding operates like a ski binding. Step down with a twisting motion and the spring-loaded connector bar locks into place inside the sole of the shoe. That's all there is to it. To exit, simply twist out.

The CycleBinding shoe features a large toe box for unmatched toe comfort and a special "Preme™" strap that adjusts the tension between the ball of the foot and the sole of the shoe, independent of the pedal. There are no protruding cleats, so walking in the shoe is comfortable and easy.

CycleBinding is the first and only fully-integrated shoe and pedal system that delivers maximum performance on the bicycle, and maximum convenience off the bicycle. There are no straps, cleats, hands, or hassles.

Shoe co-designed with Bert Torres

There are three CycleBinding systems: Racing, Triathlete and Sport. The Racing system features special high strength springs programmed to prevent premature release at maximum pedalling levels. It has a traditional lace system for long distance racing. The Triathlete system allows full mobility in the transition zones for the first time. It has the special high strength springs, and a rapid velcro® closure system. Using more traditional materials, the Sport system offers the CycleBinding concept at a price that's attractive to the serious recreational bicyclist. No matter what your level of skill and commitment, there is a system for you. Ask your favorite bicycle dealer to order the CycleBinding brand! Once you ride CycleBinding, you'll agree it was inevitable.

CYCLEBINDING®
It was inevitable.
